

FSEM UK Report to Council	Date	14/02/2022
Submitting committee/Group:	Clinical Advisory Group	
From:	Dr Glen Rae	
<p>No specific contributions were requested for the CAG to review NICE guidelines or other recommendations since the last Faculty meeting.</p> <p>The following papers have been identified and summaries written for the following 2 sections and will be published on the faculty website:</p> <p>Team Sport: Association of the British Athletic Muscle Injury Classification and anatomic location with return to full training and reinjury following hamstring injury in elite football <i>BMJ Open Sport & Exercise Medicine</i> 2021;7:e001010. doi: 10.1136/bmjsem-2020-001010</p> <p>Exercise and Medicine: Benefits outweigh the risks: A consensus statement on the risks of physical activity for people living with long-term conditions https://bjsm.bmj.com/content/early/2021/11/03/bjsports-2021-104281</p> <p>As previously highlighted in CAG reports and discussed within Faculty meetings it has been challenging to identify summarisers. Pure Sport Clinic has been identified as an as actively summarising SEM based papers in a similar way to what the faculty had intended. Contact has been made to discuss the potential of sharing this work with the faculty. It has been suggested that these summaries could include the “spotlight paper” of papers ?</p>
