## Form 7 – Audit Guidance and template

### For GPs seeking accreditation as GPwER in Musculoskeletal Medicine with the Faculty of Sports and Exercise Medicine

#### Important notes about the audit

- An audit of clinical practice should relate to your clinical practice and provide an opportunity to identify how your clinical performance compares to any local, national, and international standards.
- There is no definitive number of cases required, but it is likely to be at least 20.
- Subjects chosen for audit are numerous and varied. They may include reviews of interventions such as joint injections, assessments of diagnostic imaging use (clinical diagnosis vs. radiological diagnosis), the use and impact of blood tests, or therapeutic interventions.
- Standards set and comparison
  - Every criterion should have a set standard against which results are measured. The standards should be justified against national or locally agreed standards and expressed as a percentage
- Reflection
  - Audit results should be discussed with a clinical supervisor, and your reflection should be included.
